

Automated External Defibrillators (AEDs)

Lee

College has placed automated external defibrillators (AEDs) throughout its campus and centers for use by trained and untrained individuals in the event that another person is experiencing a sudden cardiac malfunction.

An AED is a portable device designed to be simple to use. An AED automatically detects and analyzes heart rhythm and determines if a person needs to be shocked. Once turned on, an automated voice will direct the user in clear, easy-to-understand terms. However, the units alone cannot save a person. 911 must be called as soon as possible.

For more information, contact Emergency and Safety Operations at 281.425.6409.

AED Locations

Main

Campus

- Advanced Technology Center (ATC) — Lobby outside the library
- Bonner Hall — First floor hallway
- Center for Workforce & Community Development — First floor, near the elevator

- The Lofts — First floor hallway
- Tucker Hall — Lobby
- TV-1 — First floor hallway, near room 122

McNair Center

- Welding Building
- Workforce Area, Room A127

Liberty Center

- Main foyer at the Security desk

Huntsville Center

- Main foyer at the front entrance

CPR/AED/FIRST Aid Certifications

CPR/AED/First Aid training is offered throughout the year to staff and faculty. At the end of the class, participants will receive a certification card issued by the American Heart Association that is valid for two years. Training must be repeated every two years to maintain certification.

Who can use an AED?

Ideally, an AED will be used by someone who has completed the CPR/AED/First Aid training; however, AEDs are designed to be used by anyone. Texas law explicitly extends and broadens Good Samaritan protection to trained AND untrained users, including "citizen" AED providers, their medical director, AED manufacturers, and training providers (HB 580 §779.006, HB2117 §74.151). This protection is valid as long as an act of willful or wanton negligence is not performed.
